SUMMARY

Senior Software Engineer with 10+ years designing and scaling production systems across search, payments, access control, and real-time features. Currently Co-founder & CTO of Ventryl, building a B2B fuel distribution marketplace end to end. At Accomplishr, cut search response times from 5 seconds to under 200 ms and built a shared payment service that reduced payment failures by about 90%. Holds ISC2 Cybersecurity and ISO 27001 Lead Auditor certifications, with applied GDPR, IAM, and RBAC experience in production.

EXPERIENCE

Ventryl

Apr 2026 - Present

Co-founder & CTO (pre-launch)

- Own the architecture and engineering of a B2B fuel distribution marketplace, built as a NestJS, Next.js, and PostgreSQL monorepo.
- Designed a per-business role system with depot-level access control, permission guards, and magic-link team invites.
- Built the full order lifecycle: delivery-fee negotiation, partial deliveries, pickup vs. delivery, vendor disbursements, and partial cancellations with refunds.
- Secured real-time features by sharing JWT session validation between HTTP and WebSocket guards.
- Set up production infrastructure: GitHub Actions CI/CD to DigitalOcean, Traefik reverse proxy, Cloudflare Full Strict SSL, and a firewall limited to Cloudflare traffic.
- Integrated Jira Service Management for B2B support ticketing and built a PDF receipt pipeline for payments, withdrawals, and refunds.
- Added AI-assisted engineering with Claude Code GitHub Actions for automated pull request reviews and CI failure triage.

Accomplishr

Jan 2024 - Oct 2025

Senior Full Stack Software Engineer

- Redesigned user search on OpenSearch, cutting average response time from 5 seconds to under 200 ms at scale.
- Rebuilt the community feature's aggregation queries and indexing, cutting page response time from ~3 seconds to ~200 ms.
- Designed a shared payment microservice integrating Stripe and PayPal with built-in identity verification, adopted by 4+ product features and reducing payment failures by about 90%.
- Migrated the Fireside/Mentorship live video feature from WebRTC to the Zoom API, eliminating mid-session disconnects.
- Led the calendar sync team, building two-way sync with Google Calendar and Microsoft Calendar across all product surfaces.
- Set up Google SAML SSO with role-based access control, giving engineering and CX teams one role-scoped login for internal tools.
- Built a GDPR-compliant analytics and cookie consent system that met data-governance requirements while keeping product analytics usable.
- Connected HubSpot, Contentful, and Zendesk into one help centre for support content and customer queries.
- Ran code reviews and sprint planning across two engineering teams and mentored interns, contributing to a 30%+ drop in production bugs.

Microvest

Sep 2021 - Sep 2023

Frontend & Mobile Software Engineer

- Shipped and maintained cross-platform web and mobile apps (Angular, Ionic, Capacitor) used by 20,000+ users.
- Added Cloudinary media optimization, cutting average media load time by ~500 ms for mobile users.

- Built a real-time dashboard giving internal teams live visibility into customer activity.
- Built a Treasury module with maker-checker approvals, role-based access, and automated reporting for financial operations.

The Mullings Group

Jul 2019 - Sep 2021

Full Stack Software Engineer

- Designed a Node.js Pub/Sub event broker that pushed data changes to every subscribed service as they happened, removing sync lag between data stores.
- Built real-time gameplay story workflows for an active base of 3,000+ players.
- Consolidated multiple data sources behind a single Python API layer, simplifying new integrations.
- Replaced legacy jQuery modules with React, improving stability, UI performance, and maintainability.

First Pavilion Technologies

Sep 2015 - Apr 2019

Full Stack Software Engineer

- Built a coworking management platform with real-time Wi-Fi access control and time tracking.
- Created a learning management system with analytics dashboards for monitoring student engagement.
- Standardized UI components and backend integrations across client projects to reduce long-term maintenance.

PROJECTS

AI Portfolio Assistant (iamserver.dev): RAG chat that answers recruiter questions about my work with cited sources. Pinecone retrieval via LangChain, answered by Claude from a Nuxt server route, with scope limits, prompt-injection defenses, rate limiting, and anonymized question logging.

Integrated Banking Loan: Loan processing system serving 500,000+ public servant customers, most holding multiple loans, cutting manual reconciliation by over 60%.

OGFIMS: Platform for the Ogun State Government to manage farmer enrollment, procurement, and farmer-buyer connections.

Encrypted SMS Messaging App: Encrypted messaging system with secure delivery and external SMS provider support.

Open source (npm): tailwind-sidebar-expanded (collapsible sidebar variant for Tailwind CSS), ngx-countdown (Angular countdown directive), no-log (strips console logging from production builds).

SKILLS

Architecture: Microservices, event-driven architecture, Pub/Sub, API design, scalability, performance optimization

Backend: Node.js, NestJS, Express.js, Python, FastAPI, Flask, TypeScript, REST, GraphQL, WebSocket

Frontend: React, Next.js, Vue.js, Nuxt.js, Angular, Ionic, Tailwind CSS

AI & LLM: RAG, LangChain, Pinecone, Anthropic API, OpenAI API, Claude Code

Security: OAuth2, JWT, SAML SSO, RBAC, IAM, GDPR, ISO 27001

Data: PostgreSQL, MySQL, MongoDB, Redis, OpenSearch, Elasticsearch

Cloud & DevOps: AWS, GCP, Azure, DigitalOcean, Docker, Traefik, Nginx, Cloudflare, GitHub Actions

Testing: Jest, PyTest, Playwright, TDD

EDUCATION

PGD, Cybersecurity and Intelligence Engineering | Ontario College of Management and Technology

Higher National Diploma, Computer Science | Moshood Abiola Polytechnic

CERTIFICATIONS

Certified in Cybersecurity (CC) | ISC2

ISO/IEC 27001:2022 Lead Auditor | Mastermind
